The 121st Annual International Association of Chiefs of Police Conference and Law Enforcement Education and Technology Exposition took place a month ago in Orlando, Florida with police representatives from many countries and all US safety agencies (Homeland Security, Secret Service, FBI, DEA, Diplomatic Security, FEMA, etc.).

Over 350 certified exhibitors (mainly from the US market) showed off specific technological solutions to matters of national security, counterterrorism, border guard, police, fight crime, etc. The exhibition featured the unique Greek participation of EYEONIX SA through American firm ASTRA DYNAMICS . EYEONIX SA president Mr Nick Hatzis noted that "Our participation was a challenge. IACP is a global institution with a history of 121 years. But we believe that in Greece there are security technologies and generally companies that are well equipped to approach the American and global marketplace. Our participation was through US firm ASTRA DYNAMICS with which we are in very close cooperation. The technologies presented, however, had Greek stamp!"

In talking about the technologies presented by Eyonix Mr Hatzis related: "We presented three innovative products. The TASSTA Push toTalk, an innovative integrated collective communications system (voice, data, image, video, location, task manager) which leads security services to a new era of possibilities and effectiveness. Image transmission system EYE MONITOR was also presented, which can and transmit real-time video using minimal bandwidth. Finally, we presented the Greek bulletproof KIBO watchtowers(certified by NATO) which stole the show!"

Mr Hatzis, noted the very good growth prospects that have emerged after the exposition, heralding scheduled presentations to US Government agencies and large corporations. On the need for extroversion Greek enterprises the EYEONIX President said: "There are companies that could easily stand on the international market. Especially in the field of security technologies Greek technology is innovative in many sectors. From our side, next time we will take an initiative to invite as many companies (or individual scientists) that have innovative solutions and security technologies and believe that they can them spread on the global market. We will discuss with them and try to integrate their solutions in our portfolio so they can find their way to international sales more easily. "
